## HOSPITALITY INDUSTRY ASSORTMENT

[www.naseklasje.hr/en/hospitality-industry](http://www.naseklasje.hr/en/hospitality-industry)

# GREEN HOUSE

The Naše klasje plant is painted green and called the “Green House” since we try to organize production in the “greenest” way possible, taking care of the environment. We use recyclable materials, sort waste, use environment friendly cleaning agents, monitor wastewater quality, use only electricity and gas, apply energy recirculation technology and are guided by the principles of energy efficiency and savings.

**Freon free** - We were among the first in Croatia to install a cooling system that does not use freon

gases, because freon gases are extremely harmful to the ozone layer.

**Energy recirculation** – An energysaving recirculation system has been installed, so the heat energy released by cooling is used for steam preparation and heating.

**State-of-the-art** - operating conditions - The new plant provides state-of the-art operating conditions such as functional paces with lots of natural light, heating and cooling systems with air recuperation and a view of the beautiful landscape.
